

Innovative Design. Individual Choice. One-Button Control.

Simultext® Seat-back Text Delivery System

Figaro Systems, Inc. – *innovators and global leaders in multi-lingual text delivery systems for the performing arts* – presents Simultext® the most sophisticated, visionary seat-back system available today. Conceived to enhance the live performance experience, the Simultext® system delivers text information on seven channels simultaneously. A discreet viewing monitor at each individual seat is activated with a single button and text appears in any written language in the world. Monitors feature a completely black background for optimal viewing and minimum distraction – absolutely no ambient glow.

Modular Structure, Innovative Design

Through on-going consultation and project management, Figaro Systems delivers innovative design solutions for any environment, large or small, indoor or outdoor, from grand opera houses to experimental theatres, historic restorations to modern renovations. Our Simultext system offers a completely modular design that can accommodate any combination of devices so that installation configurations are customized to each client's needs. Our fully scalable system accommodates any size theatre.

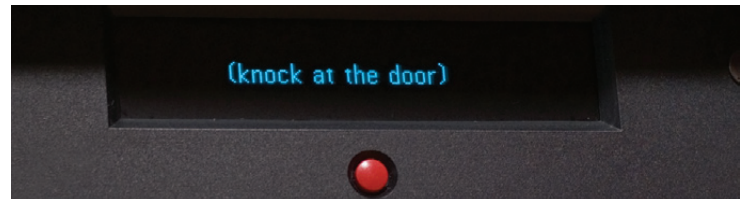

Expandable, Adaptable and Versatile

Multi-lingual translation, program annotation, sponsorship recognition, and closed captioning can be sent to and immediately displayed on any or all of the following devices: multiple video projectors, individual seat-back displays; individual seat-back video monitors, individual hand-held wireless monitors and large flat-panel screens. Incremental installations with financing and leasing options are available.
