

## Intuitive Operation. Superior Performance. Unprecedented Capabilities.

### in-OVATION™ Titling Software

Figaro Systems, Inc. — innovators and global leaders in multi-lingual text delivery systems for the performing arts — announces the release of in-Ovation™, the most advanced titling software application available on the market today. Designed specifically for titling professionals with libretto and performance script management experience, in-Ovation™ is entirely intuitive, refreshingly flexible and incorporates multi-lingual capabilities as simply as word-processing.

#### Editing Mode

Begin with familiar word-processing software, then import directly to in-Ovation™ to further manage and control the variables unique to performance titling. Adjust the display qualities or define custom cue parameters and save your preferences across the file. Import graphics and animation such as logos and create timed sequences for pre- or post-performance recognition of sponsors. Completed scripts are saved, then loaded into in-Ovation™ at any time, with all the edits intact.

Editing Mode

#### Performance Mode

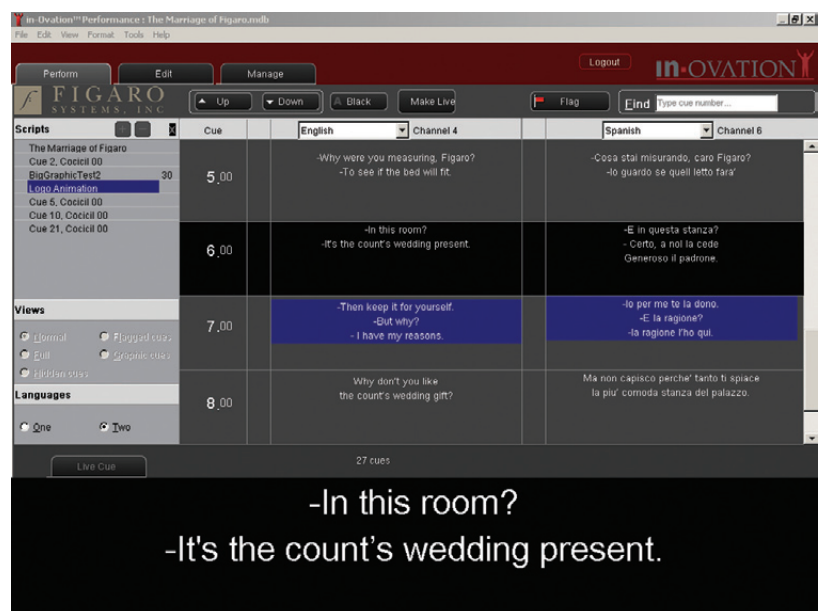

in-Ovation™ is keystroke controlled for foolproof operation during performance. Split screen display allows optimum control of the performance by presenting the actual text at the bottom and indicating clearly where that cue is in the sequence. The software has been built with a knowledge of rehearsal dynamics: With a single click, in-Ovation™ allows the titlist to return to Editing Mode, with built-in protection to ensure that titles cannot be changed inadvertently.

#### Product Technical Specifications

- Windows based
- Compatible with standard word processing software
- Multiple output options for any video projector or display device

#### Feature List

- Intuitive and flexible—*designed by professional titlists for professional titlists*
- Multi-lingual—*projects two languages simultaneously*
- Powerful—*provides fine control over cue parameters*
- Versatile—*can be used to display graphics, logos and animation*
- Keystroke activated—*push-button accuracy for performance perfection*
- Foolproof—*built-in protection in performance mode*

Performance Mode

-In this room?  
 -It's the count's wedding present.
